Shopify Developer & Software Engineer

SUMMARY

Shopify developer and software engineer with 2 years of professional experience. I build custom Shopify themes, revamp existing stores to new designs, and have moved a store off its page builder onto native Shopify templates. I also work with Next.js and TypeScript for web applications.

PROJECTS

Project 1: Page builder to native theme

Theme development and migration

- Developed a new Shopify theme from scratch for a store built almost entirely in a page builder app.
- Migrated product, collection, and article pages to native Shopify templates.
- Moved links off the old page-builder pages.

Project 2: Theme revamp and custom collection filter

Custom theme development

- Revamped a whole existing Shopify theme to a new design.
- Rebuilt the home, collection, and product pages, desktop and mobile menus, and cart drawer.
- Built a custom collection filter.

Project 3: Theme revamp and brand index

Custom theme development

- Revamped a whole existing Shopify theme to a new design.
- Rebuilt the home, collection, and product pages, desktop and mobile menus, and cart drawer.
- Built a custom, searchable page that lists all brands.

TECHNICAL SKILLS

Shopify	Shopify, Liquid, JavaScript, Custom themes, Theme revamps, Page-builder migration, Collection filtering, Quick add and cart interactions, App storefront integration, Theme performance and technical SEO
Frontend	TypeScript, Next.js, TanStack Start, Tailwind CSS, shadcn/ui, TanStack Query, Motion (motion.dev), GSAP, Expo
Backend and hosting	Hono, tRPC, Better Auth, Drizzle ORM, Prisma ORM, Neon, Convex, Payload, Inngest, Trigger.dev, Cloudflare, Vercel, Railway, Sentry
Tools and workflow	Git, GitHub, Shopify CLI, Bun, pnpm, Turborepo, Biome, ESLint, Prettier, Google Analytics (GA4), Cursor, Claude Code, Codex, CodeRabbit, AI-assisted Playwright testing

WORKING WITH AI

I use Claude Code and Codex for implementation, debugging, planning, and code explanations. I review the output, make the final decisions, and check the result in the browser.

Project identities remain private. These descriptions cover implementation contributions; they do not claim visual-design authorship, measured business results, or ownership of Shopify and third-party code.
